

McAfee ePolicy Orchestrator

The world's most complete management software just got better

Connect Security to Your Business with McAfee ePO Software

Centrally manage enterprise security

- Open framework unifies security management for systems, applications, networks, data, and compliance solutions.
- Extensible platform integrates with and leverages your existing IT infrastructure.

Take action with confidence

- Get the comprehensive views and insight you need, when you need it, to proactively address security issues—both internal and external.
- Shorten time from insight to response through actionable dashboards with advanced queries and reports.
- Identify unknown assets on your network and bring them under control with rogue system detection.

Today, more than ever, IT organizations are taking a strategic approach to security—consolidating security portfolios to reduce complexity, investing in next-generation technologies to improve protection, and integrating with existing IT assets to streamline processes. McAfee ePO software enables tens of thousands of customers to centrally manage security, achieving dramatic efficiencies.

Extensible Workflows Streamline Security and Compliance Processes

With McAfee ePO software, IT administrators can unify security management across endpoints, networks, data, and compliance solutions from McAfee and third-party solutions. McAfee ePO software provides flexible, automated management capabilities so you identify, manage, and respond to security issues and threats. You define how McAfee ePO software should direct alerts and security responses based on the type and criticality of security events in your environment, as well as create automated workflows between your security and IT operations systems to quickly remediate outstanding issues. As a result, you save time and money—with a more effective security program. McAfee ePO software helps drive down the cost and complexity of managing security.

All This with the Power of Real Time for McAfee ePO

With existing security management toolsets, complex infrastructures with hundreds of servers, and thousands of endpoints, you can't afford to wait hours or days to collect endpoint data and

then days or weeks more to remediate through traditional policy enforcement tools. Real Time for McAfee ePolicy Orchestrator (McAfee ePO) is the first and only solution that allows enterprises to query assets in seconds, identify potential issues, and mitigate risk in seconds rather than days. This groundbreaking technology dramatically reduces exposure risk and cost of security events, outages, breach potential, and damage to reputation.

A Revolutionary Architecture

Real Time for McAfee ePO is the first security control system that lets you instantly find any information about any computer, deploy products, or update configurations in the environment in a matter of seconds. In large or complex environments, this is literally hundreds to thousands of times faster than traditional solutions.

Real Time for McAfee ePO delivers:

- Instant information on the state of computing assets in seconds, not hours or days.
- Increased protection through policy enforcement to ensure that antivirus, encryption, and other crucial services are always installed, running, and up to date.
- Cross-referenced threat information with a large, continuously monitored peer-to-peer network.
- Acceleration to antivirus, data loss protection, host-based intrusion prevention, whitelisting, web filtering, firewall, encryption, and other security products offering increasing scalability and reduced management timeframes.

Connect Security to Your Business with McAfee ePO Software (continued)

Reduce complexity and streamline processes

- Guided configuration, automated work stream, and predefined dashboards make getting started a snap.
- Tag-based policy assignment precisely targets assignment of predefined security profiles to systems based on their business role or at-risk status.
- Task catalog and automated management capabilities streamline administrative processes and reduce overhead.
- A single web interface aligns security processes for maximum visibility while a single agent reduces the risk of endpoint conflicts.

Scale for enterprise deployments

- Enterprise-class architecture supports hundreds of thousands of devices on a single server.
- Supports complex and heterogeneous IT environments.
- Enterprise reporting across premises and Security-as-a-Service (SaaS) security information.

Customers Demand Performance, and McAfee ePO Responds with New Features and Benefits

New Feature	Benefit
Real Time for McAfee ePO	Responds to security queries up to 1,000 times faster.
Enhanced disaster recovery	Recover your McAfee ePO server and settings quickly and efficiently.
Native 64-bit support with reporting orientation	Improved performance.
Policy comparison, common task orientation	Improved usability and navigation.
Enterprise mobility management	Manage your mobile devices within McAfee ePO software.
Single page deployment	Simplified workflow and ease of implementation.
URL installation of endpoint products	Easy remote endpoint installation.
HTML5 UI support	Now supports the latest browsers, including IE8+, Firefox, and Safari 6.
New language support	Support for nine additional languages.
Automatic product download	For new customers installing McAfee ePO software for the first time, available products will be downloaded automatically, saving time.
“Getting Started with McAfee ePO software”	“Getting Started” improvements simplify and streamline the initial McAfee ePO software installation and product deployment workflow, making it easy to deploy protection via default policies.
Workflow improvement	Tag grouping allows administrators to organize tags into logical groups and improve categorization usability.
FIPS-certifiable code	When installed in FIPS mode, McAfee ePO software 5.1 leverages FIPS-compliant RSA libraries.
